Regional Innovation Partnerships

impulse a sustainable and efficient transfer of knowledge and technology between the industry, research and education through the cooperation between regional SMEs and academic institutions

- Future-oriented SMEs relevant fields
- Networking between students, scientists and companies
- Concentrate on relevant research topics
- Quality assurance and further development in education
- Synchronizing research and academic education
- Highly personnel qualifying
- Mentoring program
- Involvement of several stakeholders (students, scientists, industry employees, executives, entrepreneurs) in the teaching and research process design
- Actively involving high-performing students
- Living Lab Projects: Developing and transferring the findings from the research either into existing teaching modules or by building additional ones
Scientific demonstrators

Machine-machine cooperation

Cyber-physical robots as flexible module assemblies

Value-adding logistics

Human-machine interaction

Interactive configuration and intuitive controls of modular machine assemblies
